Possible problems and solutions:

Troubleshooting & Help

Launching Ghidra

When launching Ghidra with the provided scripts in <GhidraInstallDir> and <GhidraInstallDir>/support, you may encounter the following error messages:

- Problem:** Java runtime not found.
 - Solution:** A Java runtime (java/java.exe) is required to be on the system PATH. Please see the [Requirements](#) section for what version of Java must be pre-installed for Ghidra to launch.
- Problem:** Failed to find a supported JDK.
 - Solution:** The Ghidra launch script uses the Java runtime on the system PATH to find a supported version of a Java Development Kit (JDK) that Ghidra needs to complete its launch. Please see the [Requirements](#) section for what version of JDK must be pre-installed for Ghidra to launch.
- Problem:** Exited with error. Run in foreground (fg) mode for more details.
 - Solution:** Ghidra failed to launch in the background and the error message describing the cause of the failure is being suppressed. Rerun Ghidra in the foreground by setting the LAUNCH_MODE variable in the launch script you ran to fg. Alternatively, you can use the <GhidraInstallDir>/support/ghidraDebug script to run Ghidra in debug mode, which will also allow you to see the error message as well as additional debug output. **NOTE:** By default, running Ghidra in debug mode listens on 127.0.0.1:18001.

If error related to JDK happens;

Click:

Windows x64 msi Installer	204.00 MB	https://download.oracle.com/java/23/archive/jdk-23_windows-x64_bin.msi (sha256)
---------------------------	-----------	--

Click and install:

Name	Date modified	Type	Size
 jdk-23_windows-x64_bin	07/01/2025 2:56 pm	Windows Installer ...	208,900 KB

Back to ghidra and run the batch file.
You should be able to run Ghidra. You can also create a desktop shortcut for the batch file.
